Open Pilot Agreement

License and use limits for the Florida Pilot Kit

The Florida Pilot Kit is released so educators, families, microschools, libraries, and school leaders can review and use the pilot curriculum in real instructional settings before deciding whether to adopt a longer CivicOS curriculum product.

This agreement explains what the open pilot allows, what it does not allow, and when a separate institutional or commercial license is needed.

Short version

You may use, copy, print, share, and adapt the Florida Pilot Kit for noncommercial educational use, as long as you credit CivicOS Labs, LLC, keep the same Creative Commons license on adapted versions, and do not imply that CivicOS endorses your school, program, product, or modified version.

You may not sell the pilot, place it behind a paid course or membership as your own product, remove attribution, rebrand it as your curriculum, use it for commercial training, or distribute modified versions under a more restrictive license without a separate written agreement from CivicOS Labs, LLC.

The Florida Pilot Kit is licensed under the Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License (CC BY-NC-SA 4.0).

License URL: <https://creativecommons.org/licenses/by-nc-sa/4.0/>

This agreement is a plain-language explanation of the pilot use policy. The Creative Commons license controls the open-license permissions. A separate written agreement controls any paid institutional, commercial, white-label, LMS-packaged, SCORM-packaged, or district implementation use.

What this agreement allows

Under the open pilot license, you may:

- Use the Pilot Kit with students in a classroom, homeschool, microschool, library, after-school program, tutoring setting, or family learning setting.

- Copy and print the materials for your own students, household, class, pilot group, or noncommercial educational program.
- Share the original Pilot Kit files with other educators, parents, school leaders, or reviewers.
- Adapt the materials for local pacing, accessibility, grade-level support, student needs, or classroom logistics.
- Quote or excerpt limited portions of the materials in pilot reports, grant applications, ESA documentation, school board packets, parent communications, or curriculum-review documents, with attribution.
- Use the standards matrix, implementation packet, and pilot evidence documents to support internal review, adoption discussion, ESA review, or procurement planning.
- Collect student work, portfolio artifacts, and feedback generated during a pilot implementation.

These uses are allowed as long as they are noncommercial, properly attributed, and consistent with CC BY-NC-SA 4.0.

What this agreement does not allow

The open pilot license does not allow you to:

- Sell the Pilot Kit, lesson files, teacher edition, student edition, worksheets, standards matrix, or implementation packet as a standalone product.
 - Sell access to the Pilot Kit through a paid course, paid membership, paid training, paid learning platform, or paid curriculum bundle unless you have a separate written commercial license.
 - Rebrand the curriculum as your own work or remove CivicOS attribution.
 - Present a modified version as an official CivicOS edition unless CivicOS has approved it in writing.
 - Use CivicOS names, logos, marks, or institutional identity in a way that suggests sponsorship, endorsement, partnership, accreditation, approval, or official adoption where none exists.
 - Apply digital rights management, platform restrictions, contract terms, or other technical/legal barriers that prevent recipients from exercising the rights granted by CC BY-NC-SA 4.0.
 - Distribute adapted versions under a different or more restrictive license.
 - White-label the curriculum for a school, company, vendor, consultant, learning platform, or institution without a separate written agreement.
 - Convert the materials into SCORM, LMS packages, paid digital products, commercial professional development, or institutional training products without a separate written agreement.
 - Use student data, pilot feedback, or student work in marketing, public case studies, or product claims without appropriate permissions and compliance review.
-

Institutional use

Schools, districts, libraries, homeschool co-ops, microschools, and nonprofit education programs may use the open pilot for noncommercial evaluation and pilot-period instruction.

The open pilot is appropriate for:

- A teacher trying the five lessons with one class.

- A library media specialist running a short pilot program.
- A homeschool parent using the pilot with their own child.
- A microschool or co-op testing the curriculum with a small group before adoption.
- A principal, curriculum director, or review committee evaluating the materials.

A separate institutional or commercial license is needed for:

- Full-year curriculum deployment.
- Paid professional development or train-the-trainer use.
- Commercial tutoring, enrichment, or microschool offerings that charge specifically for access to the CivicOS curriculum.
- District-wide or multi-school implementation beyond pilot review.
- LMS, SCORM, vendor-platform, or white-label packaging.
- Use by a company, consultant, or provider as part of a paid product or service.

When in doubt, treat the open pilot as evaluation and limited noncommercial pilot instruction. Treat scaled adoption, ongoing delivery, paid delivery, commercial packaging, or institutional deployment as requiring a written license.

Attribution requirements

When sharing, adapting, excerpting, or presenting these materials, include attribution substantially similar to:

The Open Source Student - Florida Educator's Edition: Florida Pilot Kit. Copyright (c) 2026 CivicOS Labs, LLC. Published by CivicOS Labs, LLC. Licensed under CC BY-NC-SA 4.0.

If you modify the materials, also state that changes were made. For example:

Adapted from The Open Source Student - Florida Educator's Edition: Florida Pilot Kit. Changes were made for local pacing and student support. Original copyright (c) 2026 CivicOS Labs, LLC. Licensed under CC BY-NC-SA 4.0.

Do not suggest that CivicOS Labs, LLC endorses your modified version, school, program, organization, or use unless that endorsement is separately granted in writing.

Student data and privacy

The open pilot license gives permission to use the curriculum materials. It does not give permission to collect, publish, sell, disclose, or reuse student data.

Schools, districts, programs, and families remain responsible for:

- Following applicable privacy laws and local policies.
- Obtaining any required parent/guardian permissions.
- Protecting student work and personally identifiable information.
- Using only AI tools, websites, accounts, or platforms permitted by their setting.
- Reviewing FERPA, COPPA, district policy, school policy, and scholarship-program requirements where applicable.

The Pilot Kit is designed to support no-install, screenshot-based, and district-approved-tool implementation paths. No commercial AI account is required for the core pilot.

No approval or reimbursement guarantee

The Pilot Kit includes standards alignment, implementation documents, and ESA-supporting templates, but CivicOS does not guarantee:

- Approval by a school, district, state agency, scholarship funding organization, or curriculum committee.
- ESA, scholarship, grant, procurement, or reimbursement eligibility.
- Alignment acceptance by every reviewer or institution.
- Suitability for every student, disability profile, device environment, or school policy.

Adoption, reimbursement, accessibility, privacy, procurement, and compliance decisions belong to the relevant school, district, program, family, agency, reviewer, or scholarship funding organization.

Feedback and pilot reporting

Educators and families are encouraged to share pilot feedback with CivicOS Labs, including what worked, what confused students, what needed adaptation, and what would make implementation easier.

Do not send student personally identifiable information, private student work, disability records, discipline records, grades, or other protected information unless there is a separate written agreement and a lawful basis for doing so.

Contact for institutional or commercial licensing

For full-year adoption, institutional deployment, paid training, LMS packaging, white-label use, commercial use, or other rights beyond the open pilot license, contact CivicOS Labs through civicoslabs.com.
